SUMMARY

Second-year Computer Science student (CGPA: 9.74/10) at VIT Vellore with a strong foundation in data structures, algorithms, databases, and backend development. Builds projects spanning statistical modeling, machine learning, and system design, applying algorithmic problem-solving to practical engineering challenges.

EDUCATION

Vellore Institute of Technology (VIT), Vellore — B.Tech, Computer Science and Engineering

Expected 2029 | CGPA: 9.74/10

- 1st Rank Holder, CSE Cybersecurity, Academic Year 2025-26
- Merit Scholarship Recipient
- ICSE Board Examination — 98.4%;
- ISC Board Examination-96.75%

TECHNICAL SKILLS

Languages: C++, Java, Python, SQL

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks

Backend & Databases: MySQL, REST APIs, HTML

Data / ML: Pandas, Statistical Analysis, Bayesian Inference, Machine Learning Fundamentals, Streamlit

Tools: Git, GitHub, VS Code

PROJECTS

Diabetes Mellitus Prediction & Statistical Analysis System | *In Progress*

Python, Pandas, Streamlit, Bayesian Inference, Statistical Analysis

- Building a hybrid diabetes-risk prediction system combining machine learning classification with Bayesian inference and Gaussian likelihood estimation on patient health-indicator data.
- Implementing statistical hypothesis testing and ANOVA to identify significant relationships between health indicators and diabetes outcomes.
- Applying conditional probability and Markov-based transition modeling for probabilistic risk estimation alongside the ML pipeline.
- Developing a Streamlit interface for data input, visualization, prediction, and automated report generation.

Indoor Navigation and Wayfinding System | *In Progress*

Python, Graph Algorithms

- Designing a graph-based indoor navigation system that models building layouts as nodes and paths to compute shortest routes between locations across multiple floors.
- Implementing shortest-path algorithms to generate routes between user-selected source and destination points, including key landmarks (classrooms, labs, offices, elevators, staircases).
- Building interactive visualization of building layouts and computed routes; architected for future extension with computer-vision-based localization.
